## Hurlcon Heat Pumps

Only gas heating provides "on-emand" heating for your swimming pool or spa, allowing you to heat your pool or spa when you want it.

The addition of a correctly sized Hurlcon gas heater will give your swimming pool a minimum of 12 degrees temperature rise in a 24 hour period. By oversizing your heater greater temperature gains can be achieved in even less time.

There a number of models in the Hurlcon Range of Gas Heaters.

The BM & SB Series pool & spa heater is your high efficiency low cost electric pool heating option. Heat Pumps can achieve remarkable efficiency.

Electric heat pumps operate as reverse cycle air conditioning units. Air is drawn over the evaporator coil, heating a refrigerant gas, which in turn heats the pools water. In order to get the maximum benefit form your heat pump they should have plenty of ventilation and ideally be placed in a warm location.
